

CLIENT ONBOARDING GUIDE

Setting Up Your Convo AI Dashboard

Conversational analytics · by Nexa AI Lab

Your Convo AI dashboard turns your guest conversations — and, optionally, your website analytics — into a live, always-current dashboard. It reads from two sources, both granted to us with simple **read-only** access:

1

Conversation log (Google Sheet)

The heart of the dashboard — every chat becomes volume, intent, sentiment, FAQ and guest-country analytics.

REQUIRED

2

Google Analytics 4

Adds website traffic, devices and booking revenue. Connect it any time; the dashboard works without it.

OPTIONAL

One account for both

Wherever this guide asks you to grant access, use this single Nexa service-account address. It is read-only and used for both your Sheet and your GA4 property:

Our service-account address — grant it **Viewer** access:

convo-ai-sheets-reader@convo-ai-496805.iam.gserviceaccount.com

Everything else — building the dashboard, mapping your data, styling, refresh schedule — is done by us. You don't need a Google Cloud account or any technical setup.

1

Connect your conversation data

Google Sheet · the dashboard's core data source

REQUIRED

a. Your sheet's layout

Your conversation log should live in one tab named **Chat Logs**, with a header row in row 1 and one row per message. We read these columns by their header name — please keep the spelling as below (Timestamp first, in column A):

Column header	What it holds
Timestamp	Date & time of the message (column A)
Session ID	Groups messages into one conversation
Role	Who sent it — user or assistant
Content	The message text itself
Source	Where the chat came from (e.g. app, web, WhatsApp)
User Name	Guest name, if known
User Email	Guest email, if known
User Phone	Guest phone — used to map guest countries

Already have a sheet with different headers or layout? No need to rebuild it — just send it over and we'll map your columns to the dashboard for you.

b. Share it with us & send the link

1

Open your Google Sheet and click Share (top right)

- Paste our service-account address into the people field:

convo-ai-sheets-reader@convo-ai-496805.iam.gserviceaccount.com

2

Set the role to Viewer and click Send

- Viewer is read-only — we can see the data but never change your sheet.
- You can untick “Notify people” — the service account doesn't read email.

3

Send us the sheet link

- Copy the URL from your browser's address bar and send it to us. That's all we need to connect your conversation data.

2

Connect Google Analytics 4

Adds traffic, devices, guest countries & booking revenue

OPTIONAL

This step is optional and can be done any time. When connected, your dashboard also shows website visitors, traffic sources, device split, and booking revenue pulled straight from GA4.

1

Find your GA4 Property ID

- In Google Analytics, click **Admin** (gear icon, bottom-left).
- Open **Property Settings** and copy the **Property ID** — a 9-digit number (e.g. 345678901), *not* the G-XXXXXXX measurement ID.

2

Grant us read-only access

- In **Admin**, open **Property Access Management**.
- Click + (top right) → **Add users**, enter the address below, set role to **Viewer**, and click **Add**:

`convo-ai-sheets-reader@convo-ai-496805.iam.gserviceaccount.com`

3

Tell us your conversion event

- Send us the exact GA4 event name that represents a booking/purchase (e.g. purchase, booking_confirmed).
- Not sure? We'll default to purchase and adjust later.

What happens next

Once we have your sheet link (and, if you want it, your GA4 details), we connect everything on our side and your dashboard goes live — refreshing automatically from then on. Conversation data updates continuously; GA4 metrics refresh on a regular schedule.

Quick reference

What we need	How
Conversation sheet shared	Share with the service account as Viewer , send us the link
(Optional) GA4 Property ID	Admin → Property Settings
(Optional) GA4 access	Admin → Property Access Management → add as Viewer
(Optional) Conversion event	Your GA4 event name, e.g. purchase

Good to know & security

- We only ever request **read-only (Viewer)** access — we can never edit your data.
- GA4 must be a **GA4** property (not the older Universal Analytics).
- Revenue is shown in your GA4 property's currency; the dashboard labels it AED, so if your property uses another currency the value is right but the label may differ — tell us and we'll adjust.
- You can revoke our access at any time from Google Sheets or GA4.
