

INTEGRATION SETUP GUIDE

Connecting Google Analytics 4

Convo AI dashboards • by Nexa AI

This guide walks you through connecting your Google Analytics 4 (GA4) property to your Convo AI dashboard. Once connected, your dashboard automatically pulls visitor, traffic, device, country and booking-revenue metrics from GA4 – refreshed for you on a schedule, with no manual exports. The whole process takes about **5 minutes** and only requires read-only access.

What we need from you

1

Your GA4 Property ID

A 9-digit number (e.g. 345678901) – not the G-XXXXXXX measurement ID.

2

Read-only access to our service account on your GA4 property (we send you the exact email address).

3

Your **booking / conversion event name** (e.g. **purchase**) or we default to **purchase**.

Step-by-step

1

Find your GA4 Property ID

- " In Google Analytics, click **Admin** (the gear icon, bottom-left).
- " Open **Property Settings**.
- " Copy the **Property ID** – the 9-digit number shown at the top right.

2

Grant us read-only access

- " In **Admin** open **Property Access Manager**.
- " Click the **+** button (top right) **Add user**.
- " Enter our service-account email (below) and set the role to **Viewer**.
- " Click **Add**. That's it – Viewer is read-only; we can never edit your analytics.

We will email you this exact address – paste it in the next step: **your -**
convo-ai-sheets-reader@convo-ai-496805.iam.gserviceaccount.com

3

Tell us your conversion event name

- " If you track bookings/purchases as a GA4 event, send us its **exact name** (e.g. **purchase**, **booking_confirmed**).
- " Not sure? No problem – we'll use **purchase** by default and adjust later.

What happens next

Send us the Property ID and confirm access is granted. We connect everything on our side — you don't need a Google Cloud account or any technical setup. Your dashboard begins showing GA4 metrics (active users, traffic sources, devices, guest countries and booking revenue) within the first sync, and refreshes automatically from then on.

Quick reference

What	Example	Where to find it
GA4 Property ID	345678901	Admin → Property Settings
Grant Viewer access	our ...iam.gserviceaccount.com email	Admin → Property Access Management
Conversion event	purchase	Your GA4 Events / your web team

Good to know

- This must be a **GA4** property (not the older Universal Analytics).
- We only ever request **read-only (Viewer)** access.
- Revenue is shown in your GA4 property's own currency; the dashboard labels it AED, so if your property is set to another currency the value is correct but the label may differ — tell us and we'll adjust.
